PROFESSIONAL SUMMARY

First-Class Honours Computer Science graduate from Monash University (CGPA 3.95/4.00) with hands-on experience in Java backend development, Spring Boot, SQL, REST APIs, and event-driven systems. Collaborative and detail-oriented, with strong problem-solving skills and a commitment to building reliable, maintainable software.

EDUCATION

Bachelor of Advanced Computer Science | Monash University
Graduated: July 2026 | CGPA: 3.95 / 4.00 (First Class Honours)

PROFESSIONAL EXPERIENCE

Java Developer Intern (Fund Risk) | Ant International
Nov 2025 – Feb 2026 | Java, Spring Boot, SQL

- Optimized financial risk-check rules for the Hong Kong regional tenant, reducing unnecessary production alerts and improving monitoring accuracy through root-cause analysis of P0-P5 incidents, Java service debugging, and SQL-based transaction validation.
- Migrated 50+ legacy SQL-based business rules into Java Spring Boot rule checks, analyzing database relationships, translating business logic, and validating correctness before production deployment.
- Developed an AI-assisted rule migration workflow using MCP and ReAct agents, integrating a database MCP server and custom tools for schema analysis, index recommendations, and query-result validation.

PROJECTS

Academic Dashboard Website (Final Year Project)
Mar 2026 – Jun 2026 | Java, Spring Boot, React.js, Firebase

- Developed interactive React dashboards to visualise attendance, engagement, and student risk using Tailwind CSS and Recharts.
- Built Spring Boot REST APIs to process uploaded Excel attendance data, calculate analytics, and serve dashboard and reporting interfaces.
- Integrated Firebase Firestore to persist attendance records, student and unit summaries, and analytics results.
- Implemented attendance trend charts, unit comparisons, and individual student reports to help lecturers identify students requiring intervention.

Ticket to Ride – Java Application
Mar 2026 – Jun 2026 | Java, OOP, Design Patterns

- Led architecture and object-oriented design of a Java application in a three-person team across 3 Agile sprints.
- Applied SOLID principles and Command, Strategy, Mediator to separate game actions, rules and turn coordination.
- Created UML class and sequence diagrams to communicate system architecture, component relationships, and gameplay interactions.

Run Monash Database System
May 2025 – Jun 2025 | Oracle SQL, MongoDB, PL/SQL

- Designed and implemented an Oracle relational database for a running carnival case study, enforcing data integrity through SQL constraints and business rules through PL/SQL functions, triggers, and stored procedures.
- Populated and queried both Oracle and MongoDB databases using joins, subqueries, and transaction control; transformed relational data into nested JSON documents for MongoDB querying and updates.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, HTML, CSS
Frameworks & Libraries: Spring Boot, React.js
Databases: Oracle SQL, MongoDB, Firebase
Tools & Practices: Git, Jira, REST APIs, CI/CD, Agile, OOP, Design Patterns, Data Structures & Algorithms, Message Brokers
Languages (Spoken): English, Chinese, Malay

ACHIEVEMENTS & LEADERSHIP

Recipient of JPA Full Scholarship

- Awarded for outstanding academic performance and leadership potential; consistently maintained high academic results throughout the degree.

Student Mentor – School of Information Technology

- Mentored 15 new students, providing academic and personal guidance during university transition; organised engagement sessions and collaborated with faculty to monitor progress and support student success.
